*Real Estate in South Asia* Prashant Das, Ramya Aroul, Julia Freybotte, 2019-06-03 This book provides insights into commercial and residential real estate markets in one of the world's fastest growing regions: South Asia. Despite being the growth leader of the future, South Asia is among the least integrated regions with a large need for real-estate-specific information and knowledge. Scholars and industry practitioners from a variety of backgrounds come together to provide pan-regional and country-specific insights into—amongst others—institutional, economic and real estate market characteristics, real-estate-specific legislation, real estate financing, development and urban planning practices in Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan and Sri Lanka. A particular focus of the book is on topics such as the provision of affordable housing, sustainability, innovative office concepts such as co-working and the development of real estate investment trust (REIT) markets in South Asia. This book integrates knowledge on real estate markets in and across South Asian countries by means of country profiles and case studies to provide industry professionals, policy makers and scholars with a fundamental understanding of characteristics, opportunities and challenges in the region. The book is intended for readers with interests in real estate development, finance and investment, urban planning and housing in South Asia. It is also suitable as a reference textbook for undergraduate and graduate students in programs focusing on real estate, economic development, urban planning and public policy in South Asia and other emerging countries.

Maldives Asian Development Bank,2015-08-01 The Maldives has propelled itself to middle-income status despite its geographic constraints and the risks it faces as a small island economy. The economy has been growing in the last 5 years, but development challenges remain formidable. How can the Maldives sustain and improve the pace of its economic growth and reduce poverty and inequality? This report identifies the critical constraints to inclusive growth and discusses policy options to overcome such constraints.

The Indian Ocean Tsunami Pradyumna Prasad Karan,Shanmugam P. Subbiah,2011-01-01 December 2004, a tsunami swept over the coasts of Indonesia, Sri Lanka, India, Thailand, and other South Asian countries, leaving hundreds of thousands dead and many more without the resources to rebuild their lives. With casualties as far away as Africa, the aftermath was overwhelming: ships could be spotted miles inland; cars floated in the ocean; legions of the unidentified dead—estimated 225,000—were buried in mass graves; relief organizations struggled to reach rural areas and provide adequate aid to survivors. The Indian Ocean Tsunami: The Global Response to a Natural Disaster is the first comprehensive assessment of the environmental, social, and economic costs of this tragedy. Soon after the tsunami, an international team of geographers, geologists, anthropologists, and political scientists traveled to the most damaged areas to observe and document the tsunami's impact. The Indian Ocean Tsunami draws on data collected by this team. Editors Pradyumna P. Karan and Shanmugam P. Subbiah, along with contributors from multiple disciplines, examine numerous issues that arose in the aftermath of the tsunami, such as inequities in response efforts, unequal distribution of disaster relief aid, and relocation and housing problems. The Indian Ocean Tsunami is organized into several sections, the first of which deals with the ecological destruction of the tsunami. It includes case studies and photographs of the damage in Japan, Indonesia, South India, and other areas. The second section analyzes the economic and social aspects of the aid responses, specifically discussing the role of NGOs in tsunami relief, the strengths and weaknesses of the reconstruction process, and the lessons the tsunami offers to those who are responsible for dealing with future disasters. In the tsunami's aftermath, the inadequacies of governmental and privately funded aid and the challenge of rehabilitating devastated ecosystems quickly became apparent. With this volume, Karan and Subbiah illuminate the need for the development of efficient, socially and environmentally sustainable practices to cope with environmental disasters. They suggest that education about the ongoing process of recovery will mitigate the effects of future natural disasters. Including maps, photographs, and statistical analyses,

The Indian Ocean Tsunami is a clear and definitive evaluation of the tsunami's impact and the world's response to it.

Deepening Economic Cooperation between India and Sri Lanka Indra Nath Mukherji, Kavita Iyengar, 2013-09-01 This book analyzes the performance and impact of the India-Sri Lanka free trade agreement over the past decade and suggests the way forward. India became an important source of imports for Sri Lanka immediately after the implementation of the free trade agreement. Bilateral trade between the countries increased steadily thereafter, with Sri Lankan commodities finding a large market in India. The composition of trade also changed with an increased number of new goods being traded. The book computes indices and suggests scope for deepening economic cooperation between the two countries by pruning the negative lists for trade in goods, identifying potential investment, and suggesting policies for expanding cooperation in services.

*Lagoons of Sri Lanka* Silva, E. I. L., Katupotha, J., Amarasinghe, O., Manthirithilake, H., Ariyaratna, R., 2013-03-01 Sri Lanka, an island in the Indian Ocean, has lagoons along 1,338 km of its coastline. They experience low-energy oceanic waves and semidiurnal microtidal currents. The Sri Lankan coastal lagoons are not numerous but they are diverse in size, shape, configuration, ecohydrology, and ecosystem values and services. The heterogeneous nature, in general, and specific complexities, to a certain extent, exhibited by coastal lagoons in Sri Lanka are fundamentally determined by coastal and adjoining hinterland geomorphology, tidal fluxes and fluvial inputs, monsoonal-driven climate and weather, morphoedaphic attributes, and cohesive interactions with human interventions. Most coastal lagoons in Sri Lanka are an outcome of mid-Holocene marine transgression and subsequent barrier formation and spit development enclosing the water body between the land and the sea. This process has varied from one coastal stretch to another due to wave-derived littoral drift, sediment transport by tidal fluxes, fluvial inputs and wave action or, in other words, sea-level history, shore-face dynamics and tidal range as the three major factors that control the origin and maintenance of the sandy barrier, the most important features for the formation and evolution of coastal lagoons with their landward water mass. In certain stretches of Sri Lanka's coastline, formation of the barrier spit was very active due to shore-face dynamics that resulted in chains of shore parallel, elongated lagoons. They are among the most productive in terms of ecosystem yield and show some similarities to large tropical lagoons with respect to sea entrance, zonation, biodiversity and ecosystem services. However, some of them become seasonally hypersaline due to lack of freshwater input and high evaporation. Functions and processes of some of these water bodies are fairly known. There are a fair number of small back-barrier lagoons of different shapes and sizes whose origin goes back to sea-level history. They are located on low-energy coasts with prominent beach ridges and restricted hinterland geomorphology. Mixing processes of these landward indentations are hindered by elevated sand dunes, and their salinity increases due to poor freshwater input and high evaporation leading to seasonally hypersaline conditions. These sedimented lagoons, primarily confined to the southeastern coast of the island, are biologically the least productive, with limited

ecosystem values and services. Another group of moderately elongated semicircular, slightly large lagoons in the same coast, formed exclusively by submergence due to mid-Holocene sea-level rises, do not receive sufficient freshwater input leading to seasonally hypersaline conditions. They are also biologically unproductive but some are ecologically important since they provide habitats conducive to migratory birds. In contrast, some lagoons on the southern coast receive sufficient freshwater via streams draining the wet zone, maintain more estuarine salinities, exhibit rich biodiversity and serve as functional resource units. Lagoons formed by mid-Holocene submergence and recession of water level with simultaneous chain barrier formation on the high energy southwest coast, which includes cliffs, small bays and headlands, show peculiar configurations and link channel characteristics. Some of these irregular water bodies have clusters of small isles and luxuriant mangrove swamps with high biodiversity but not very rich in catadromous finfish and shellfish species due to the restricted nature of the entrance channel and nondistinct salinity gradients. The barrier-built, seasonally hypersaline lagoon complex in the Jaffna Peninsula, the largest lagoon system in the country with multiple perennial entrances show extremely narrow salinity ranges towards the upper limit of salinity. The main lagoon is elongated and the shore parallel to eastward and southward extensions is connected by narrow channels. The other lagoon in the Jaffna Peninsula is elongated, shore parallel and ribbon-shaped and receives tidal water throughout the year but freshwater is received only from precipitation and surface runoff. Even though the lagoons in the peninsula are extremely rich in ecosystem heterogeneity their hydrology and hydrodynamics have been severely disturbed by infrastructural development for transportation and by attempts to create a freshwater river for Jaffna. There are a few virgin lagoons of moderate size also on the northern coast, south of the Jaffna Peninsula on both the east and west sides. They look very typical tropical lagoons rich in biodiversity and biological production but their structure, functions and values are virtually unknown in scientific or socioeconomic terms. The lagoons located on the east coast are not numerous but relatively large in extent. They are also an outcome not only of mid-Holocene sea-level rises but of submerged multi-delta valleys or abandoned paleo estuaries. When inundated, the multi-delta valley configuration became elongated and is shore parallel with a smooth seaward shoreline; both shorelines become irregular when coastal waves are weak, and internal waves are created by the action of local winds. Configuration of a lagoon formed by inundation of an abandoned river valley is irregular with a long entrance channel extended landward. These lagoons are highly productive with a variety of associated ecosystems, large open water areas and wide perennial sea entrances. When the lagoon is too much elongated, zonation is prominent due to fewer entrance effects. Lagoons form a particular type of natural capital which generates use values (fish, shrimp, fuelwood, salt, fodder, ecotourism, anchorage, recreation, etc.) and nonuse values (habitat preservation, biodiversity, ecosystem linkages, etc.) contributing positively towards improving the human well-being. Of many values of lagoons in Sri Lanka, only the extractive values are generally utilized at present, by way of fish and shrimp catches, salt production and use of mangrove for various purposes. Besides, coastal lagoons generate a range of

nonextractive use values and nonuse values, which could add towards the total economic value. Misuse has taken place at several instances when “use” adversely affects the status of the resources or the health of the ecosystem due to vulnerability and poverty, population pressure, urbanization, development activities and multi-stakeholder issues. The status of lagoon resources shows that the resources in the majority of Sri Lankan lagoons still remain satisfactory, somewhat good or very good. Nevertheless, concerns for management of lagoons in Sri Lanka exist only where “use values” (extractive values, such as fish and shrimp) exist. There is no evidence of resources management in lagoons for inspirational, scholarly values or tacit knowledge of the same. Management for use values exhibits several stages from zero management to comanagement via community management and state intervention. Most of Sri Lanka’s lagoons have the potential for generating high extractive and nonextractive use values which could improve the human well-being, while maintaining resources sustainability. Unfortunately, these potentials have not been understood or “seen” yet by the relevant authorities, although a few instances of exploring this potential were noticed.

**Ten Years a Nomad** Matthew Kepnes, 2019-07-16 Part memoir and part philosophical look at why we travel, filled with stories of Matt Kepnes' adventures abroad, an exploration of wanderlust and what it truly means to be a nomad. New York Times bestselling author of *How to Travel the World on \$50 a Day*, Matthew Kepnes knows what it feels like to get the travel bug. After meeting some travelers on a trip to Thailand in 2005, he realized that living life meant more than simply meeting society's traditional milestones. Over 500,000 miles, 1,000 hostels, and 90 different countries later, Matt has compiled his favorite stories, experiences, and insights into this travel manifesto. Filled with the color and perspective that only hindsight and self-reflection can offer, these stories get to the real questions at the heart of wanderlust. Travel questions that transcend the basic how-to, and plumb the depths of what drives us to travel — and what extended travel around the world can teach us about life, ourselves, and our place in the world. *Ten Years a Nomad* is a heartfelt comprehension of the insatiable craving for travel, unraveling the authenticity of being a vagabond, not for months but for a fulfilling decade.

**A Brighter Future for Maldives Powered by Renewables** Asian Development Bank,2020-11-01 Maldives has no proven fossil fuel reserves, but it has abundant renewable energy sources such as solar, wind, and ocean (tidal, wave, and ocean thermal), and has the potential to produce green hydrogen fuel using renewable energy. The coronavirus pandemic has impaired Maldives' economy, severely affecting its tourism industry, which is one of the country's main economic drivers. The country's recovery will largely depend on the rapid transformation and diversification of its economic activities. Renewable energy offers a promising alternative to fossil fuels as the country embarks on a transformation challenge. This Road Map serves as a guide for Maldives' energy transition—from being powered by costly and polluting fossil fuels to being powered by affordable and efficient renewable and cleaner energy sources.

Conundrum Of An Island: Sri Lanka's Geopolitical Challenges Asanga Abeyagoonasekera,2021-01-15 This book is a compilation of essays on several themes intended to provoke thought on and promote understanding about everyday political and social life on an island facing constant geopolitical and domestic political challenges. The themes of this book are: 4/21 Terror Attack and National Security; China, Belt and Road Initiative and Sri Lankan Foreign Policy; Geopolitics; Sustaining Democracy and Facing a Pandemic; and Domestic Political Stability, Leadership and Economic Crime. Most essays have captured the domestic viewpoint from which to begin drawing a wider picture of the global geopolitical tapestry. The chapters enframe a variety of domestic political incidents, conflicts of various actors, and the conundrum of an island in the Indian Ocean, stuck in the triangular maritime power dynamics among the United States, China, and India. They also examine the influences from foreign nations towards Sri Lanka's foreign policy and the dynamics of security challenges in the larger geosphere and marine sphere of South Asia and the Indian Ocean respectively. The chapters offer the reader an Olympian viewpoint of the challenges Sri Lanka faces, attempting to find connections and patterns towards greater external geopolitical influence and how it impacts domestic politics.

**Maritime Safety and Security in the Indian Ocean** Vijay Sakhuja,Kapil Narula,2016 This book provides a

comprehensive view of the maritime safety and security challenges in countries of the Indian Ocean Rim Association (IORA). Various issues such as trans-national crime including piracy, terrorism, drug and arms smuggling; Humanitarian Assistance and Disaster Relief (HA/DR) and maritime and aeronautical Search and Rescue (SAR); Illegal, Unreported and Unregulated (IUU) fishing and resource management for sustainable development are viewed from the perspectives of IORA members. It also discusses the role of cooperative organizational structures and the need for capability building and capacity optimization in the light of existing legal frameworks for enhancing maritime safety and security in the Indian Ocean.
